# PRODUCT PROCESS

# OUR AIRSTABLES

The Acceptance and Carriage of all type of Horses is governed by the current IATA Live Animal Regulations (LAR), the respective countries and Saudia Cargo Regulations. IATA LAR is adopted by the Kingdom of Saudi Arabia and designates the minimum guidelines for animals transported by Saudia. These regulations also cover the Airstable design requirements.

Widely regarded by the equine industry as the finest available, our Airstables provide horses with the utmost comfort and security. Produced with a rubberized compound, the floors ensure safe footing and are completely leak proof. In addition, our Airstables have adjustable ventilation openings on all sides which maximize airflow and prevent horses from becoming startled by noise and other factors when closed. Finally, the internal partitions can be easily adjusted to provide additional space when necessary.

# KEY OPERATIONAL STAGES

1. Fly Horse shipments are prioritized for latest possible loading by the origin station and are therefore available for immediate unloading at the destination station.
2. Shipments are offloaded from the aircraft first and transferred to the offloading area as quickly as possible in order to avoid causing stress.
3. CIC inform both the shipment broker and consignee of the shipment's arrival.
4. Quarantine and customs clearance are carried out immediately to avoid unnecessary delays.
5. The shipment is delivered to the consignee.
